Are your uncontrolled movements always in the spotlight?
Shift the focus more on you.

INGREZZA is different. It’s the only treatment proven to reduce TD that’s always one capsule, once daily.

Ask your healthcare provider about reducing your TD movements with INGREZZA® (valbenazine) capsules.

Important Information
Approved Use
INGREZZA® (valbenazine) capsules is a prescription medicine used to treat adults with movements in the face, tongue, or other body parts that cannot be controlled (tardive dyskinesia).

It is not known if INGREZZA is safe and effective in children.

IMPORTANT SAFETY INFORMATION
INGREZZA can cause serious side effects in people with Huntington’s disease, including: depression, suicidal thoughts, or suicidal actions. Tell your healthcare provider before you start taking INGREZZA if you have Huntington’s disease and are depressed (have untreated depression or depression that is not well controlled by medicine) or have suicidal thoughts. Pay close attention to any changes, especially sudden changes, in mood, behaviors, thoughts, or feelings. This is especially important when INGREZZA is started and when the dose is changed. Call your healthcare provider right away if you become depressed, have unusual changes in mood or behavior, or have thoughts of hurting yourself.

Select Important Safety Information
Do not take INGREZZA if you:

- are allergic to valbenazine, or any of the ingredients in INGREZZA.

Before taking INGREZZA, tell your healthcare provider about all of your medical conditions including if you: have liver or heart problems, are pregnant or plan to become pregnant, or are breastfeeding or plan to breastfeed.

Tell your healthcare provider about all the medicines you take, including prescription and over-the-counter medicines, vitamins, and herbal supplements.

Please see additional Important Safety Information on page 9 and accompanying INGREZZA full Prescribing Information, including Boxed Warning.
Tardive dyskinesia (TD): Persistent, uncontrollable body movements

If you have persistent, uncontrollable movements and are taking certain mental health meds, it’s time to ask your healthcare provider about a treatable condition called TD.

TD movements can occur anywhere in the body:

- FACE (MOUTH, LIPS, TONGUE, JAW, EYES)
- UPPER BODY (ARMS, TORSO)
- HANDS/FINGERS
- LEGS
- FEET/TOES

What medicines can cause TD?

You may have been prescribed certain mental health medicines (antipsychotics) to treat one of these conditions:

- Depression
- Bipolar disorder
- Anxiety disorder
- Schizophrenia/schizoaffective disorder

If you are currently taking antipsychotic medicine, do not stop, adjust, or switch your medicine without talking to your healthcare provider.

Select Important Safety Information

INGREZZA may cause serious side effects, including:

- Sudden swelling from an allergic reaction (angioedema). Sudden swelling has happened after the first dose or after many doses of INGREZZA. Signs and symptoms of angioedema include: swelling of your face, lips, throat, and other areas of your skin, difficulty swallowing or breathing, and raised, red areas on your skin (hives). Swelling in the throat can be life-threatening and can lead to death. Go to the nearest emergency room right away if you develop these signs and symptoms. Your healthcare provider should stop your treatment with INGREZZA.

- Heart rhythm problems (QT prolongation). INGREZZA may cause a heart problem known as QT prolongation. Symptoms of QT prolongation may include: fast, slow, or irregular heartbeat, dizziness or fainting, or shortness of breath. Tell your healthcare provider right away if you have a change in your heartbeat (a fast or irregular heartbeat), or if you faint.

- Neuroleptic Malignant Syndrome (NMS): NMS is a serious condition that can lead to death. Call a healthcare provider right away or go to the nearest emergency room if you develop these symptoms and they do not have another obvious cause: high fever, stiff muscles, problems thinking, very fast or uneven heartbeat, or increased sweating.

- Abnormal movements (Parkinson-like). Symptoms include: shaking, body stiffness, trouble moving or walking, or keeping your balance.

Please see additional Important Safety Information on page 9 and accompanying INGREZZA full Prescribing Information, including Boxed Warning.
Living with TD

You’ve worked hard to improve your mental health. Don’t let uncontrollable movements hold you back.

Even mild TD movements can affect your work, social outings, and daily activities.*

Those movements can also affect your emotional well-being.*

“I had a lot of jaw and tongue movements, and some in my feet and hands. I remember someone took a video of me doing karaoke. It was the first time I saw what my movements looked like…and I didn’t like what I saw.”

– Steve, living with bipolar disorder and tardive dyskinesia

Steve was compensated by Neurocrine Biosciences, Inc. to share his story

“[Because of my uncontrollable body movements] I was extremely self-conscious, embarrassed, and withdrawn. I had a very active lifestyle before these movements.”

– Moira, living with depression and tardive dyskinesia

Moira was compensated by Neurocrine Biosciences, Inc. to share her story

Caring for someone with TD

If you’re the care partner of someone with uncontrollable body movements from TD, it’s helpful to remember that your loved one:

• May not be aware that their uncontrollable movements are TD
• Might not want to seek help because they don’t understand what’s happening with their body

Many people with TD reported feelings of anxiety, frustration, and low self-esteem.*

Is TD impacting you? Ask your healthcare provider about reducing uncontrollable movements with #1-prescribed INGREZZA—it’s the only treatment proven to reduce TD that’s always one capsule, once daily.

*In a survey, 127 people diagnosed with TD were asked, “TD may impact you in many different ways. To what extent has TD impacted you in each of the following areas?” Answers were based on a scale of 1 (not impacted at all) to 7 (extremely impacted).

Select Important Safety Information

Sleepiness (sedation) is a common side effect with INGREZZA. While taking INGREZZA, do not drive a car or operate dangerous machinery until you know how INGREZZA affects you. Drinking alcohol and taking other drugs that may also cause sleepiness while you are taking INGREZZA may increase any sleepiness caused by INGREZZA.

Please see additional Important Safety Information on page 9 and accompanying INGREZZA full Prescribing Information, including Boxed Warning.
What is INGREZZA?

INGREZZA is different.
It’s the only treatment proven to reduce TD that’s always one capsule, once daily.

INGREZZA® (valbenazine) capsules is used to treat adults with TD in the face, tongue, and other body parts. It is not known if INGREZZA is safe and effective in children.

Some mental health medicines (antipsychotics) can cause abnormal dopamine signaling in the brain, which can lead to uncontrollable body movements from TD. These movements are unlikely to improve without treatment.

Current research suggests that INGREZZA helps by correcting this abnormal dopamine signaling; however, how INGREZZA works to treat TD is not fully understood.

• Dopamine is a chemical in the brain that helps control movement
• TD may be caused by too much dopamine signaling in the brain
• INGREZZA is believed to reduce extra dopamine signaling

Select Important Safety Information

The most common side effect of INGREZZA in people with tardive dyskinesia is sleepiness (somnolence).

The most common side effects of INGREZZA in people with Huntington’s disease are sleepiness (somnolence), allergic itching, rash, and trouble getting to sleep or staying asleep.

These are not all of the possible side effects of INGREZZA. Call your doctor for medical advice about side effects. You are encouraged to report negative side effects of prescription drugs to the FDA. Visit MedWatch at www.fda.gov/medwatch or call 1-800-FDA-1088.

Please see additional Important Safety Information on page 9 and accompanying INGREZZA full Prescribing Information, including Boxed Warning.
Simple dosing with INGREZZA

Always one capsule, once daily
Take any time
With or without food

INGREZZA is available in 3 effective dosages. The recommended dose of INGREZZA is 80 mg.
Your healthcare provider will start you on 40 mg for 1 week and may keep you on 40 mg, or switch you to 60 mg or 80 mg, depending on your treatment needs.

Take INGREZZA exactly as your healthcare provider tells you.
Your healthcare provider will tell you what dose of INGREZZA* (valbenazine) capsules to take and when to take it.

• INGREZZA can be taken with or without food
• Do not stop taking INGREZZA without first talking to your healthcare provider
• If you take too much INGREZZA, call your poison control center at 1-800-222-1222

Proven to reduce uncontrolled TD movements

In a clinical study, many people taking INGREZZA began to see results in as little as 2 weeks.* People taking INGREZZA for TD can stay on their current dose of most mental health medicines and therefore maintain their mental health progress.

*INGREZZA was studied in a 6-week clinical trial. A total of 234 people participated in the study. Results were based on 79 people taking the recommended dose of 80 mg.

7 out of 10 people taking INGREZZA 80 mg saw reduction in uncontrollable body movements at 6 weeks.†
†Patients had at least a 1-point reduction on an uncontrollable movement severity scale at 6 weeks vs before treatment. This post-clinical study evaluation included 70 patients taking INGREZZA 80 mg, measuring uncontrollable movements before starting treatment and at 6 weeks of treatment.

In a long-term study, INGREZZA provided continued reduction in uncontrollable body movements through 48 weeks.

Do not take INGREZZA if you:

• are allergic to valbenazine, or any of the ingredients in INGREZZA.

If you or your loved one has TD, ask a healthcare provider if INGREZZA® (valbenazine) capsules could help reduce uncontrollable body movements.

Please see additional Important Safety Information on page 9 and accompanying INGREZZA full Prescribing Information, including Boxed Warning.
INGREZZA side effects

In a clinical study, the most common side effect of INGREZZA in people with tardive dyskinesia was sleepiness.

INGREZZA may cause serious side effects, including:

• Sudden swelling from an allergic reaction, including swelling of your face, lips, throat, and other areas of your skin, difficulty swallowing or breathing, and raised, red areas on your skin (hives)
• Heart rhythm problems
• Neuroleptic Malignant Syndrome (NMS)
• Abnormal movements, including shaking, body stiffness, trouble moving or walking, or keeping your balance

Sleepiness (sedation) is a common side effect with INGREZZA

While taking INGREZZA, do not drive a car or operate dangerous machinery until you know how INGREZZA affects you. Drinking alcohol and taking other drugs that may also cause sleepiness while you are taking INGREZZA may increase any sleepiness caused by INGREZZA.

These are not all of the possible side effects of INGREZZA.

What should I do if I experience side effects?

Call your doctor for medical advice about side effects. You are encouraged to report negative side effects of prescription drugs to the FDA. Visit MedWatch at www.fda.gov/medwatch or call 1-800-FDA-1088.

INGREZZA and your mental health

In a clinical study, psychiatric status remained stable overall in people taking INGREZZA® (valbenazine) capsules for TD, including those who were also taking medicine for:

• Depression
• Bipolar disorder
• Schizophrenia/schizoaffective disorder
• Anxiety disorder

People taking INGREZZA for TD can stay on their current dose of most mental health medicines.

Do not stop taking INGREZZA without talking to your healthcare provider first.

Tell your healthcare provider about all the medicines you take, including:

• Prescription medicines
• Over-the-counter medicines
• Vitamins
• Herbal supplements

Please see additional Important Safety Information on page 9 and accompanying INGREZZA full Prescribing Information, including Boxed Warning.
The INBRACE® Support Program is dedicated to helping you on your treatment journey.

The INBRACE® Support Program is designed to help patients who are prescribed INGREZZA® (valbenazine) capsules by assisting with prescription fulfillment, providing financial assistance options, and product support.

You may pay as little as a $0 copay on your INGREZZA prescription.*

*This offer is valid only for patients who have commercial (nongovernment-funded) insurance. Additional terms and conditions apply.

INGREZZA is available through a select network of specialty and local affiliated pharmacies. A specialty pharmacy provides medicines that aren’t typically available at your local retail pharmacy.

Once coverage has been authorized, INGREZZA will be shipped directly to you via overnight mail.

In some cases, your healthcare provider may send your prescription to a local affiliated pharmacy. This pharmacy will work with you and your provider to fill your INGREZZA prescription.

The specialty pharmacy will call you to discuss delivery and other important details about INGREZZA. Each time your prescription needs to be refilled, the specialty pharmacy may call to verify your information. These calls may come from an unidentified toll-free number, so be sure to answer your phone.

Can you get INGREZZA without prescription insurance?

If you do not have prescription coverage for INGREZZA and lack the financial resources to pay for the medicine, you may be able to receive your prescription at no cost through the INGREZZA Patient Assistance Program.† Your healthcare provider can help you apply for the program or call 1-84-INGREZZA to learn more.

†Additional terms and conditions apply.

To learn more about INGREZZA, the Copay Savings Card, or the INBRACE® Support Program, call 1-84-INGREZZA (1-844-647-3992) 8 am to 8 pm ET, Monday through Friday or visit INGREZZA.com/Savings-Resources
